## Interested in Compiling a Portfolio?

You might be interested in attending the June 15<sup>th</sup> Webinar with Doug Stinson on how to create Portfolios and about the Annual N4C Portfolio Competition - If so, register [here](#).

## Interested in Becoming a Photo Judge?

If you've ever imagined being the one critiquing images at a club meeting, you might be interested in training to be a judge yourself. If enough people are interested, a judge's training session will be held in **October, 2024**. Please contact your club rep if you are interested in this training. Exact date(s) will be announced later this summer.

## FotoClave is Back!

**P**lease **SAVE THESE DATES - February 17-19, 2024** N4C's FotoClave will resume! Thank you to all who have already volunteered for the organizing committee. We're still looking for a few volunteers, especially for the weekend of the conference. Please Contact Vicki Stephens ([vjs.1194@gmail.com](mailto:vjs.1194@gmail.com)) if you're interested in volunteering.

# President's Corner

*By Jennifer O'Donnell*

Last month, while on an annual trip to the Tetons in Wyoming, I found my great white whale. As a wildlife photographer, I should have been ecstatic, right? But I found I was more frustrated, even a bit angry, just because I didn't get a good photograph of it. What was this great white whale? A Great Grey Owl.

Now, I am not a birder, per se, but I have been fascinated with these owls ever since I saw one on the cover of a photography magazine many years ago. And I have searched for one ever since. Of course, owls in general can be a challenge, since they are mostly nocturnal and can often only be seen around dawn and dusk. But the great grey owl usually nests in the dense boreal forests in the northern parts of the U.S and Canada, making it even more challenging to find. Great grey owls are so elusive that they've been called "the ghosts of the forest".

Despite all my efforts over the years, I found this owl quite by accident. I was driving back to my cabin after sunset, and, as many do in the Tetons, I pulled over to see what a few people by the side of the road were looking at. An owl, one person said. Okay. But as I looked through the binoculars, I realized it wasn't just any ol' owl. It was the elusive owl I'd been looking for. I grabbed my 600mm f/4 lens and hoped I could document this find. It was, after all, almost 9 o'clock at night. My ISO was off the charts. I tried making many

various adjustments, but I just couldn't make a dent in the high ISO. When the owl flew off right in my direction, I prayed that I'd gotten enough data that I could make something of it in post, but when I pulled it up on my computer, I was devastated. It was just way too grainy for even the best AI DeNoise programs to fix enough for anything other than a tiny version of it for viewing. I got angry and frustrated.

But then I stopped myself. I had finally seen something I'd been searching for over many years. I needed to "stop and pet the whale". This is a mantra that I often use when I lose sight of a beautiful moment or opportunity when worrying too much about getting a particular photo. It came from a story I heard a professional nature photographer tell years ago. He told of being in a bay in Baja where the gray whales go to

give birth. The whales there were very friendly and curious, and he watched as one of the whales went right up next to a nearby boat on which everyone had their cameras up to their faces trying to get a photograph of it instead of just reaching out and interacting with the whale (which was allowed). He said, "sometimes you've just gotta stop and pet the whale". I have used that as a sort of mantra ever since so

that I can keep perspective at times and so that I remember to appreciate and enjoy a situation or a find whether or not I get a photograph of it.

It turned out that two days later, when I went out early to look in the same general area where I had seen that owl before, I found it again. It surprisingly stayed in the open for quite a while that morning, and I was able to get many more photos of that elusive creature. As the morning went on, people driving by stopped and asked, "What are you seeing, a grizzly"? When they were told it's an owl, they were disappointed, until I spoke up and said, "That's not just an owl. It's a great grey owl, and they're more rare to see around here than a grizzly." A few more people then stopped to appreciate what they were seeing and "pet the whale" too.

## A “Must See” Exhibition: *Ansel Adams in Our Time*

By Doug Stinson

Group f.64, and their philosophy of photography, was introduced to the world at the de Young Museum in November 1932. At the time, the de Young was the only museum in San Francisco showing contemporary art. So, it is only fitting that the de Young should collaborate with the Fine Arts Museum of Boston to put on *Ansel Adams in Our Time*.

The exhibition surveys the full extent of Adams's work and places it in context with photographers who preceded him and came after. It is too extensive for me to provide a comprehensive review, but I would like to share a few thoughts.

The exhibit includes all the most famous Adams's photographs. Two prints from the same negative of *Clearing Winter Storm, Yosemite National Park, California* (1944) are shown side-by-side; one small and sepia-toned and one neutral and at grand scale. The difference in the impression each makes is remarkable. Adams's work in Yosemite is compared to much earlier work by Watkins and by Muybridge.

What was more interesting to me was Adams's seldom seen (at least by me) non-landscape work. For example, figure 1, *Cemetery Statue and Oil Derricks, Long Beach, California* 1939-1940. This brings to mind his work of the architecture of the pueblos. As Adams is well known for his environmental advocacy, this has been widely interpreted as a comment on the negative impact of oil drilling, an interpretation that surprised Adams. Another example is *Rails and Jet Trails, Roseville, California* (ca. 1953), shown in figure 2. This is typical of his work in the 1950 and 60s. While demonstrating his continuing mastery over the control of tone and contrast, it brings in elements of conceptual photography. Some have complained that the exhibit focused too much on modern conceptual photographers rather than more familiar landscape photographers such as Galen Rowell or Eliot Porter. In fact, only a small fraction of the photographs on display can be characterized as “post-modern” and I think they are important to show how Adams's has inspired and challenged today's photographers – including photographers who challenge traditional ways of understanding the American landscape.

Figure 1. Ansel Adams, *Cemetery Statue and Oil Derricks, Long Beach, California* 1939-1940. (I was unable to avoid reflections, sorry.)

Figure 2. Ansel Adams, *Rails and Jet Trails, Roseville, California* (ca. 1953).

Figure 3. Bryan Schutmaat, *Cemetery, Tonopah, NV* (2012)

Some of the contemporary work includes photographs by Bryan Schutmaat, including *Cemetery, Tonopah, NV*, 2012, shown in figure 3, which should be contrasted with the famous *Moonrise, Hernandez, New Mexico*, 1941. Also, in the exhibit are very traditional images of Yosemite made by San Francisco contemporary photographer Binh Danh. Surprisingly, these are daguerreotypes, a technology that predates even Watkins. While beautifully matted and framed, I prefer a presentation of Danh's work at the Haines Gallery in September 2012. In that exhibit the daguerreotypes were presented without mats, revealing them as small, silver jewels.

The exhibition is on view at the de Young Museum through July 23, 2023.

Figure 4. Binh Danh, *Yosemite Falls* (2012).

# Honors Recipients

N4C honors fellow photographers who give back to the photographic community and the community at large. There are four types of awards: Associateship, Fellowship, Honorary and Service Recognition Award. In the case of Associateship and Fellowship, they are based on a points system in various categories such as club or N4C positions held, photographic expertise, judging and others like instructional programs, publishing and photographic based services.

## Associateship and Fellowship Honors

The N4C Associateship and Fellowship honor awards are granted on the basis of accumulated points to outstanding members who have distinguished themselves both photographically and by service to N4C and its member clubs. These honors have been designed not only to reward the deserving, but also to stimulate the creative photographic efforts of all N4C members and to encourage cooperation and assistance between the more experienced members and the beginners.

## Congratulations to the 2022 Honors Recipients!

Left to right:

**Charles Ginsburg** - Associateship Honor (Peninsula Camera Club)

**Trisha Brown** - Associateship Honor (Santa Rosa Camera Club)

**Nancy Goodenough** - Associateship Honor (Santa Rosa Camera Club)

**Lynn Oakleaf** - Fellowship Honor and Service Recognition Award (Diablo Valley Camera Club)

## Honorary and Service Awards

The Honorary (HN4C) is awarded by the council to the retiring President of N4C and other deserving individuals (presenters, charitable donor etc.) who have contributed greatly to N4C and its members. **Lucy Beck and Vicki Stephens** received Honorary Awards for sharing the President's role for 2022.

There is one final Honor given and that is the Service Recognition Award. It is given to a N4C Board member Nominee for outstanding longevity, diversity and quality of service to N4C and its member clubs. Congratulations to **Lynn Oakleaf**, the recipient of a Service Recognition Award this year.

## Process for Associateship and Fellowship Honors

Given the data and validation requirements, the nomination or application process can start at any time. At least quarterly, N4C Representatives should canvas their club members to apply to the Honors program.

Candidates or Nominations shall complete the Honors application to meet the point requirements for the Associateship or Fellowship Award.

Applications are to be passed to the member's club N4C Reps who will in turn submit to the Honors Committee at the November N4C Board meeting. At the Vice Presidents discretion, this can be extended to the next N4C Board meeting on a case-by-case basis

Honor plaques will be presented at N4C's Annual Banquet in February, listed in Foto Fanfare newsletter and added to the N4C Honors list which appears on the N4C website.

For applications, please click below.

# Notable Photographers and Their Images

By Mark Brueckman

No. 34 - June, 2023

## Eve Arnold - Champion of the Underdog

*"If a photographer cares about the people before the lens and is compassionate, much is given. It is the photographer, not the camera, that is the instrument." – Eve Arnold*

This quote made me think of my relationship to people who I photograph, especially people on the street with whom I do not have a relationship, other than we are in the same location at the same time. When I am doing street photography, I rarely talk to my subjects. I capture their images as discreetly as possible, often they don't notice me or my camera. When they notice me and give me eye contact, I get a little nervous and wonder if there might be a confrontation coming. Fortunately, there rarely is a confrontation, the person just continues on their way, to work, to lunch or perhaps to the dentist.

Eve Arnold had a different approach, she engaged with her subjects.

Eve Arnold (née Cohen) was born in Philadelphia in 1902. She became interested in photography when she worked at a Kodak photo-finishing plant in New Jersey. Her first major presentation of work was in 1951, in *Picture Post*. *Picture Post* was the premier photojournalist magazine in the UK, what *Life* magazine was to the USA. Later, she became the first woman photographer at the Magnum Agency. She shot fashion and celebrities, many of which she befriended. Here is a picture she took of Joan Crawford having a facial in 1959.

I was surprised by this photo, it looks like something out of an horror movie. I wondered what Crawford thought of this image. It is not something you put in the breakfast nook. But this shows the power of having great access – with great access comes great pictures.

I like to watch old horror movies. There are several over-the-air channels that show these on Saturday nights. I watch one every weekend. Last weekend, I watched the 2020 remake of "The Brain That Wouldn't Die". The original was made in 1961. I have watched the original several times, the first

time as a young child in the dark-paneled basement of my home in Tonawanda, New York. It was one of the many black and white horror movies from the 1960s that terrified me. I enjoyed them. Not sure why, but many people like to be scared by movies.

The Plot: A doctor drives too fast, has an accident and decapitates his girlfriend. Fortunately, he has been experimenting with transplants. He grabs the head and rushes off to his laboratory like a football player doing an end around. He puts the head on a metal pan and keeps it alive with some tubes and secret serum. The head can talk and when she realizes her situation, she is not happy. You can't blame her: Who wants to experience life from a baking tray?

The doctor plans to kidnap another woman and transplant his girlfriend's head to the kidnapped woman's body. The head tells him that is not cool. This storyline allows for the inclusion of many curvaceous women at which the doctor can leer. Coincidentally, the doctor keeps a victim of his early unsuccessful transplants in a locked space accessible from the head room. (Get it- "head" room!) The monster and the head become friends – and plot their revenge.

Back to Eve Arnold.

Arnold took an interest in the Civil Rights movement and the cultures of other countries. She took this image in 1958.

What are your thoughts on this image?  
What is the event?

The event was a civil rights integration dinner party in Virginia in 1958. It took courage to host and attend an event like this at this time and place. Black Americans were living a real horror story of segregation and violent resistance to cultural change.

Separately, did you find the photographer in the image? Aside from the importance of the event, the somewhat hidden image of Arnold makes the image even more interesting.

Arnold photographed daily life in America and many other countries including China, Russia, Afghanistan and the shanty towns of South Africa. She even got access to harems and brothels. She

was a champion of the underdog. As stated in her opening quote, she cared about people. Here is another image I found interesting. Again, what do you think is going on in this image?

Why are there multiple brides?

The image was taken in Godalming, England in 1965 at a convent. These are novice nuns who are about to take their vows and marry Christ. I was raised Catholic, but had never known of this type of event. Another example of how access can create great images.

Time for my monthly rant.

Did you notice the rule of odds "violation" in this image?

When I did my judges training, the rule of odds was discussed. Actually, it wasn't discussed, it was somewhat dictated as a must have – three of something is better than four, etc. I hear this rule quoted quite often in camera club competitions.

When I hear someone deprecate an image with the “rule of odds”, it really grinds my gears.

There is no “rule of odds”, at least not in any official rules I have seen. It is a convention that has been adopted as a rule, kind of like how my uncle was forced to write with his right hand when he was going to elementary school in the 1940s, even though he was naturally left-handed. Right-handed is better than left-handed, or so the conventional thinking was for thousands of years.

I disagree with the rule of odds convention. I not only question its validity, I think it is a vehicle for making images “wrong”. It is intellectually lazy. I liken it to saying strawberry tastes better than vanilla; they are different flavors and one is not better than the other. An image of three nuns would not be better than this image of four nuns.

There is no rule of odds in painting, I see plenty of great paintings that don’t follow the rule of odds. Photographic conventions like the rule of odds discourage growth and risk taking, they should be challenged. Better yet, abandoned.

Your homework this month is to think about the rule of odds and investigate if it is a valid convention.

Arnold died in London on January 4, 2012, aged 99.

Here is a website of her work created by her grandson – <https://www.evearnold.com/about-eve>

Take care.

And be careful of that monster, the one hiding in that dark area of your house that you dislike entering in the middle of the night, after you heard some kind of noise...

## Portfolios Made Easy(er)!

Curious about the Portfolio Competition? Intrigued, but don’t know where to start? Intimidated by “theme” and “statement of intent”? Wondering what “sequencing” means? We have a webinar for you!

On Thursday June 15, 2023 at 7:00 PM Doug Stinson will conduct a free webinar to strip away the mystery and get you started on a fun and rewarding way to express yourself photographically – the N4C Portfolio.

We will start with the basics: what is a N4C portfolio and why creating one is a great way to expand your photographic horizons. We will explain what is meant by a Theme and how that is critical to creating a cohesive portfolio. You will then be taken step-by-step through creating a theme, and its expression in a Statement of Intent. This will lead naturally into the selection of images for your portfolio and how good portfolio images may differ from images that do well in traditional Camera Club competitions. Finally, we will cover some of the mechanics of preparing and submitting your portfolio to the N4C competition.

To register for this informative webinar, click

## Stab from the Past

*An occasional informal history of the Northern California Council of Camera Clubs,  
ripped from the pages of Foto Fanfare*

1981

The Annual Awards Dinner was held on January 10<sup>th</sup> at Spenger's Fish Grotto. Two Hundred members and friends attended.

On June 13<sup>th</sup> two N4C members, Albert Bekker and W.F. Scott Jr, presented award winning nature and travel slides, sequences and stories. They provided instruction on how they achieved their results. This was N4C's money raising event of the year, Admission was \$7.00.

On September 26<sup>th</sup>, N4C presented a program featuring Howard and Alice Kessler and Bon and Betty Potts. They discussed "What is a

Nature slide", slide duplicating, desert photography, flower photography in the field- problems and solutions. There was also a display of prints from various clubs. Admission was \$7.50 in advance, \$8.50 at the door.

FotoClave was held on November 7 & 8 at the Hyatt House in San Jose. Program included a camera check clinic by Joy Lynn Camera and Photo.

A seminar for print judges was planned to start the second week of February 1982 and continuing for 8 weeks, one night a week. It covered all aspects of printing, composition, dodging, cropping, burning in, and experimental processes in both B&W and color. Fee was \$20. Attendance was limited to 10 students.

FotoFanfare did not publish the minutes of Council meetings this year, so there was no information on what issues were addressed. N4C did not start posting minutes on [n4c.photoclubservices.com](http://n4c.photoclubservices.com) until 2010, so there may be quite a gap in the history.

# Removing Lens Flare from Your Photo

By Doug Stinson

Lens flare (figure 1) can be distracting and obscure critical elements in your photographs. But before you try to eliminate it, consider that it may be an artistic element! In fact, we have become so accustomed to seeing lens flare movie makers sometimes add it to CGI-generated scenes to make them seem more “realistic”, as in figure 2.

Assuming you don't want flare in your photo, ideally you will prevent it from getting in there in the first place. The standard ways of accomplishing this are to (a) use a lens hood, (b) remove unneeded filters from your lens, (c) keeping the lens surface clean, (d) hiding the sun (or other light source) behind a tree branch (or other object) and (e) using your hat to cast a shadow on the front of the lens. For a “hands-free” alternative to your hat, consider a “French Flag”

Figure 1. A particularly egregious example of lens

Figure 2. Flare was added to create this scene in the movie *Interstellar*.

as this one shown in figure 3 available from [Small Rig](#) or a similar one from [Dinkum Systems](#).

But what if lens flare is unavoidable, for example, if you want to include the light source in the picture?

Sometimes you can use Photoshop's clone or healing brush tools to reduce the effect of the flare. Often, I have found these tools do not give acceptable results. However, with a bit of preplanning, you can set yourself up to

successfully remove flare in post processing.

The trick is to take two photographs of the scene in rapid succession, one with the light source toward the right side of the frame and one with the light source toward the left side of the frame. For example, consider the two photographs of sunrise over Half Dome shown in figure 4. The one with the sun on the left side has most of the flare on the right, while the one with the sun on the right side has most of the flare on the left. This means, between the two photos, I can always find parts of the image unobscured by flare.

Figure 3. French Flag on my Canon 5D, adjusted to cast a shadow on the front lens element. The flag is even more useful when the camera is handheld.

Figure 4. Two framings of sunrise over Half Dome.

The next step is to bring the two images into Photoshop as separate layers and align them as a panorama. (Note: the order of the layers can matter; if you can't achieve the desired effect in the subsequent steps, try reversing the order.) First, select both layers by clicking on one and then Command (Mac)/ Control (Windows) click on the other. Align the layers using the Edit>Auto Align Layers command. Then click Edit>Auto Blend and select "Panorama". The result is shown in figure 5 along with the layer pallet. Note that a mask has been created for each layer.

Figure 5. Panorama (left) after blending the image in figure 5 and the corresponding layer pallet (right).

The mask on the top layer is allowing the flare on the left side of the bottom layer to show. So, what we need to do is select the mask on the top layer by clicking on it, select a soft brush a bit larger than the flare we want to remove, select the color white, and paint over the flare. This will allow the pixels on the top layer that are unaffected by flare to show. You may need to experiment with different brush sizes and softness. If you make a mistake, simply paint on the mask with the opposite color, in this case, black. You may also want to try blending the two layers together using an opacity less than 100%. The result, along with the modified masks, are shown in figure 6. Not perfect, perhaps, but a lot better than either original.

Figure 6. Panorama (left) after editing the top mask to reveal the pixels unaffected by flare and the corresponding layer pallet (right).

After cropping and some tweaking, the final image is shown in figure 7.

Figure 7. Final image, cropped and with curves applied to selective areas.

## Behind the Photograph

I have a useful app on both my laptop and phone, [The Photographer's Ephemeris](#) (aka TPE). An ephemeris gives the positions of astronomical objects in the sky at any given time. With TPE you can input a location and, for example, the time of sunrise will be displayed along with a map showing where on the horizon the sun will rise. Playing around with this app one evening in my hotel room just outside Yosemite National Park, I discovered that if I positioned myself at Glacier Point, the sun would rise directly over Half Dome, as shown in figure 8. That was a sight worth getting up at 3:30 AM to see!

I set up my camera on a tripod in the beautiful pre-dawn light. To make the shot more interesting, I closed the lens to  $f/32$  in order to generate multiple diffraction rays from the sun. This shot turned out pretty much as I had envisioned it: bright starburst over Half Dome with rays of light illuminating the mountains and valleys, fading into the distance.

There was one flaw – severe lens flare. Now some may enjoy this effect, but for me, it detracted from an otherwise romantic scene. But I'm shooting directly into the sun. What can be done? Then I noticed a second image had the flare going in the opposite direction, and it occurred to me I could combine the images in Photoshop to eliminate the flare.

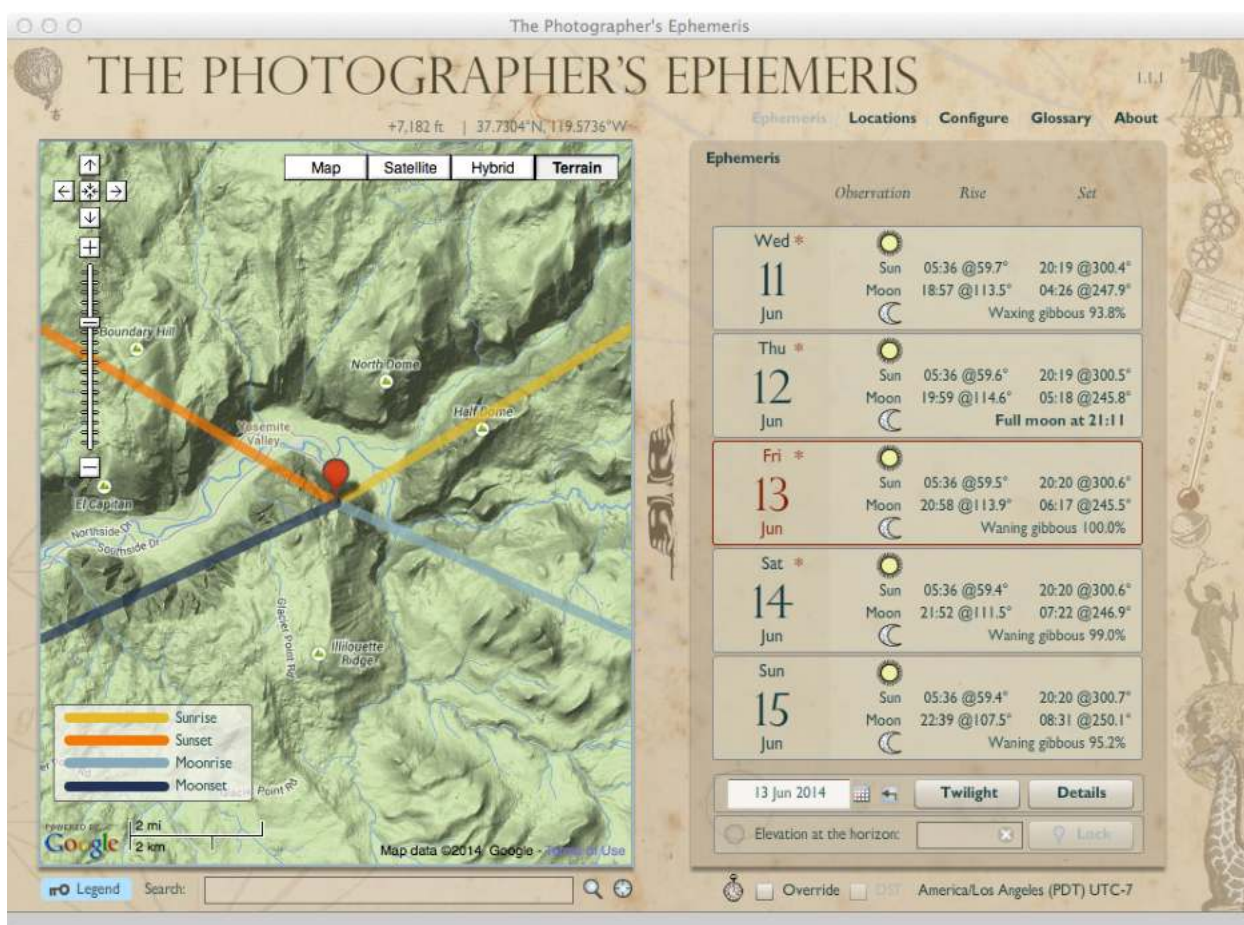

Figure 8. Screen shot from The Photographer's Ephemeris that started me on this adventure.

## N4C Mission Statement

To promote a spirit of voluntary cooperation among the camera clubs of Northern California. To sustain and increase an interest in the science and art of photography among photographers of said area. To promote social and educational programs for the benefit of member clubs. To create and maintain a representative body which will serve the best interests of all member clubs and groups and attempt to provide workable solutions to their individual and collective problems. To provide services and facilities for the use and benefit of the member clubs.

**N4C is a proud member of**

N4C is a member of the **Photographic Society of America (PSA)** and its local chapter, **Yerba Buena**. The Photographic Society of America is a worldwide organization for anyone interested in photography. The society includes casual shutterbugs, serious amateurs, and professional photographers.
